Title: 5 Thread Groups – Load Testing

Objective:

To create and execute 5 Thread Groups in JMeter with multiple users and iterations, display the test results using listeners, and validate the performance of the application.

Steps:

1. Create 5 Thread Groups.
2. Set Number of Threads (Users): 5.
3. Set Ramp-Up Period: 3 seconds.
4. Set Loop Count: 2.
5. Add Listeners to display and analyze the test results.
6. Run the test and validate the generated results.

1)Thread Group -1

Application Used: easy calculation

Objective:

To validate the performance and response time of the Easy Calculation application by simulating multiple users performing calculation operations repeatedly.

Result by using View Results Tree Listener:

The screenshot shows the Apache JMeter 5.6.3 interface. The Test Plan tree on the left includes a Thread Group with a View Results Tree listener. The main panel displays the 'View Results Tree' listener results for a Thread Group. The results are shown in a tree structure with a 'Text' tab selected. The 'Text' tab shows the following details:

- Thread Name: Thread Group1 2-2
- Sample Start: 2026-09-15 13:46:44 IST
- Load time: 243
- Connect Time: 0
- Latency: 241
- Size in bytes: 48311
- Sent bytes: 134
- Headers size in bytes: 258
- Body size in bytes: 48053
- Sample Count: 1
- Error Count: 0
- Data type ("text/html"): text
- Response code: 200
- Response message: OK

The 'HTTPSampleResult' fields are also displayed:

- ContentType: text/html; charset=UTF-8
- DataEncoding: UTF-8

Result by using View Results in Table Listener:

The screenshot shows the Apache JMeter 5.6.3 interface. The Test Plan tree on the left includes a Thread Group with a View Results in Table listener. The main panel displays the 'View Results in Table' listener results for a Thread Group. The results are shown in a table with the following columns:

Sample #	Start Time	Thread Name	Label	Sample Time(ms)	Status	Bytes	Sent Bytes	Latency	Connect Time(ms)

The table shows 10 samples, all with a status of 'Success' (green checkmark). The 'No of Samples' is 10, the 'Latest Sample' is 248, the 'Average' is 678, and the 'Deviation' is 469.

2)Thread Group -2:

Application used: Blaze Demo

Objective:

To evaluate the performance of the Blaze Demo web application by simulating multiple users performing common activities such as browsing products, selecting items, and completing application workflows.

Result by using View Results Tree Listener:

The screenshot shows the Apache JMeter 5.6.3 interface. On the left, the 'Test Plan' tree shows a 'Thread Group' containing several 'Blaze Demo-HTTP Request' samplers. The 'View Results Tree' listener is selected. The right pane displays the details of a selected sampler, including the request and response data. The response data shows a successful HTTP 200 status with a 'text/html' content type.

Result by using View Results in Table Listener:

The screenshot shows the Apache JMeter 5.6.3 interface with the 'View Results in Table' listener selected. The right pane displays a table of test results for the 'Blaze Demo-HTTP Request' samplers. The table includes columns for Sample #, Start Time, Thread Name, Label, Sample Time (ms), Status, Bytes, Sent Bytes, Latency, and Connect Time (ms). The table shows 10 samples, all with a status of 'Success'.
