Title: JMeter – Database Validation Using JDBC Request and Response Assertion

Use response assertion to validate author name = newton use “config element” - JDBC connection configuration “sampler” -JDBC Request and connect with MySql Sever database.

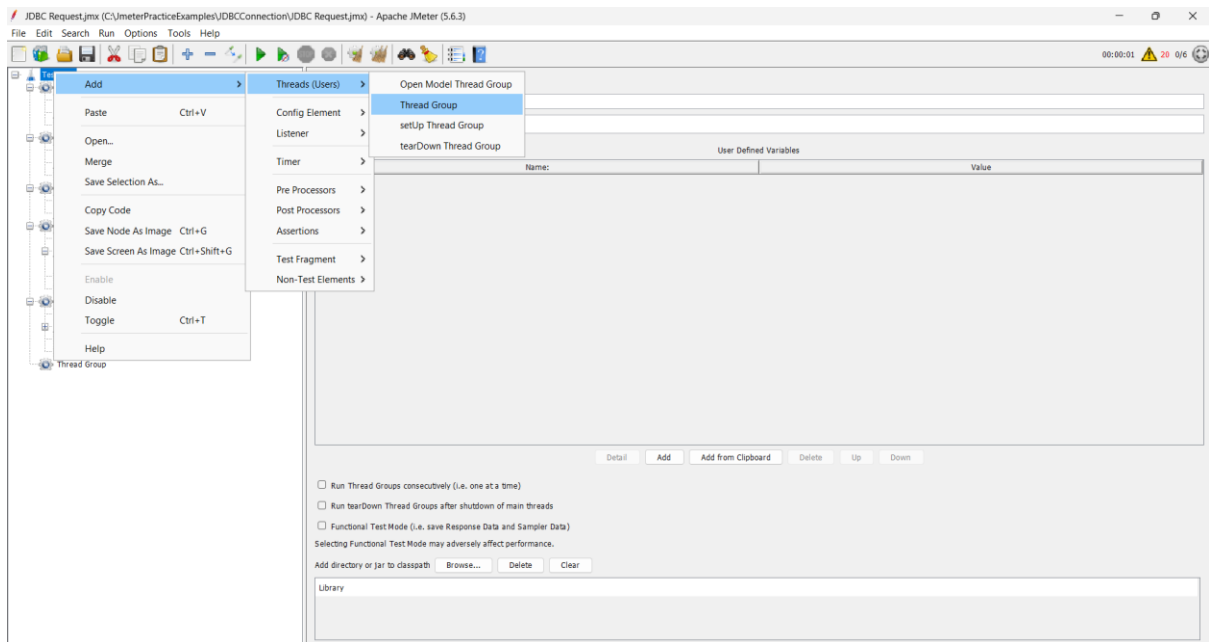

Step 1: Query Execution in Mysql Workbench

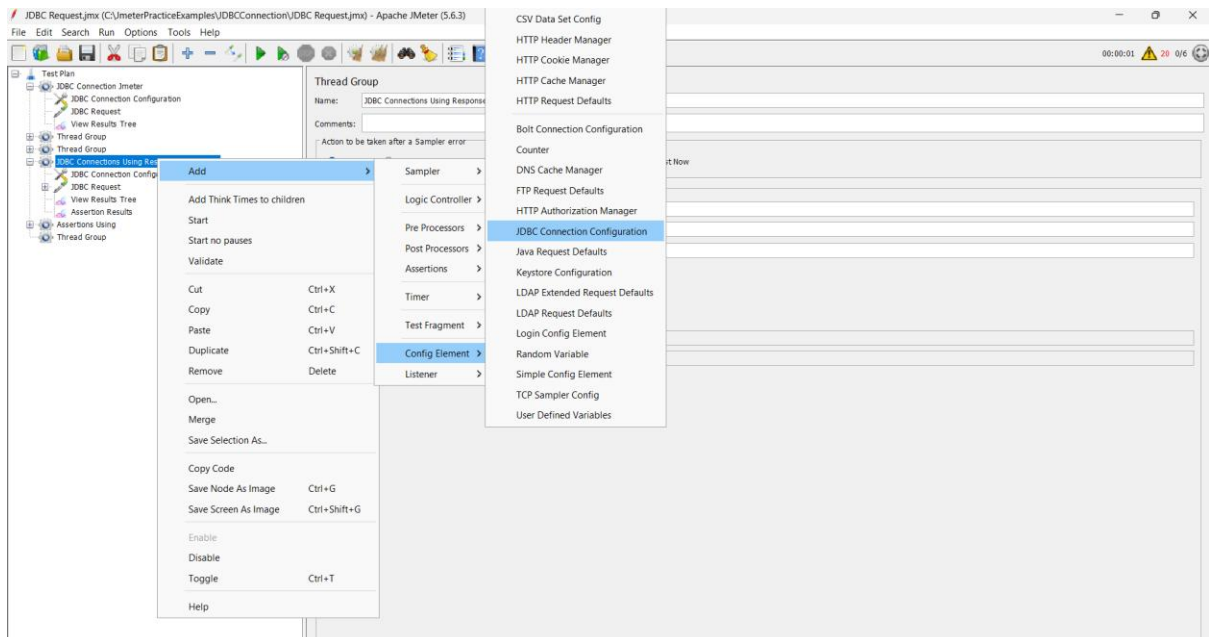

Step 2 – Open Apache JMeter

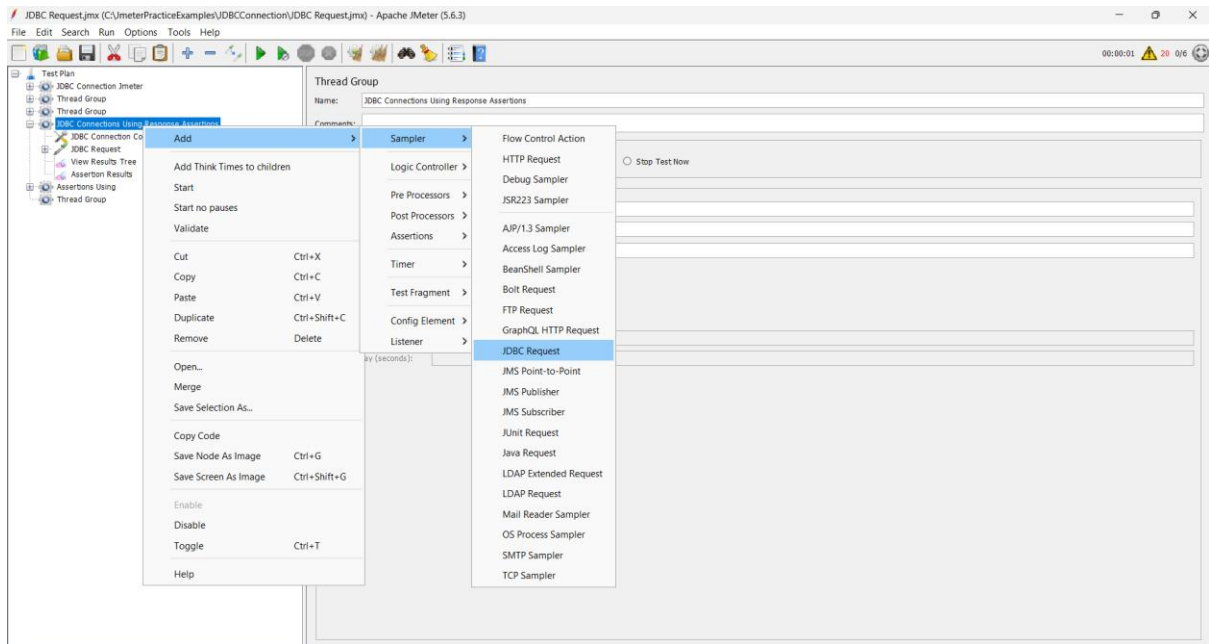

Step 3 - Add Thread Group

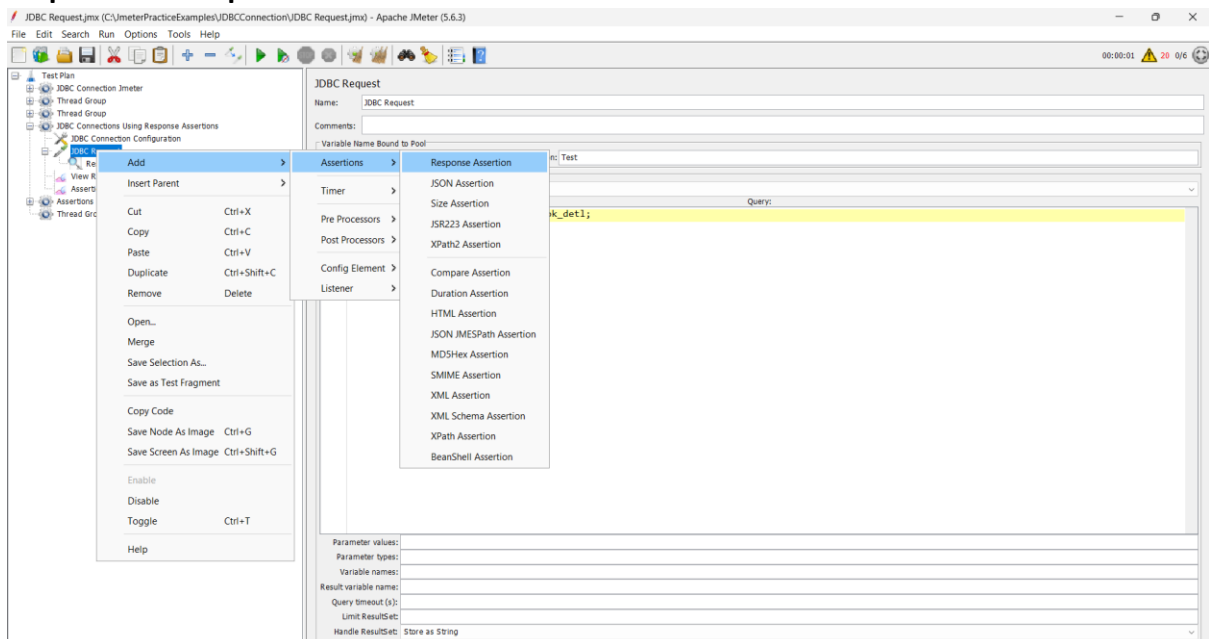

Step 3 – Add JDBC Connection Configuration

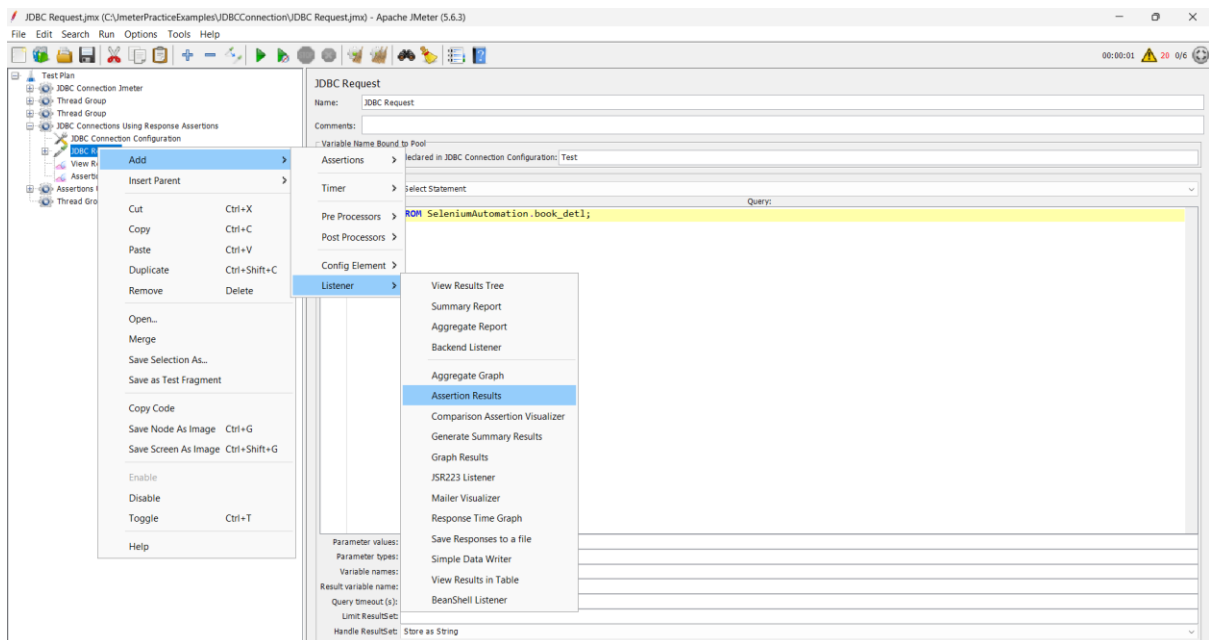

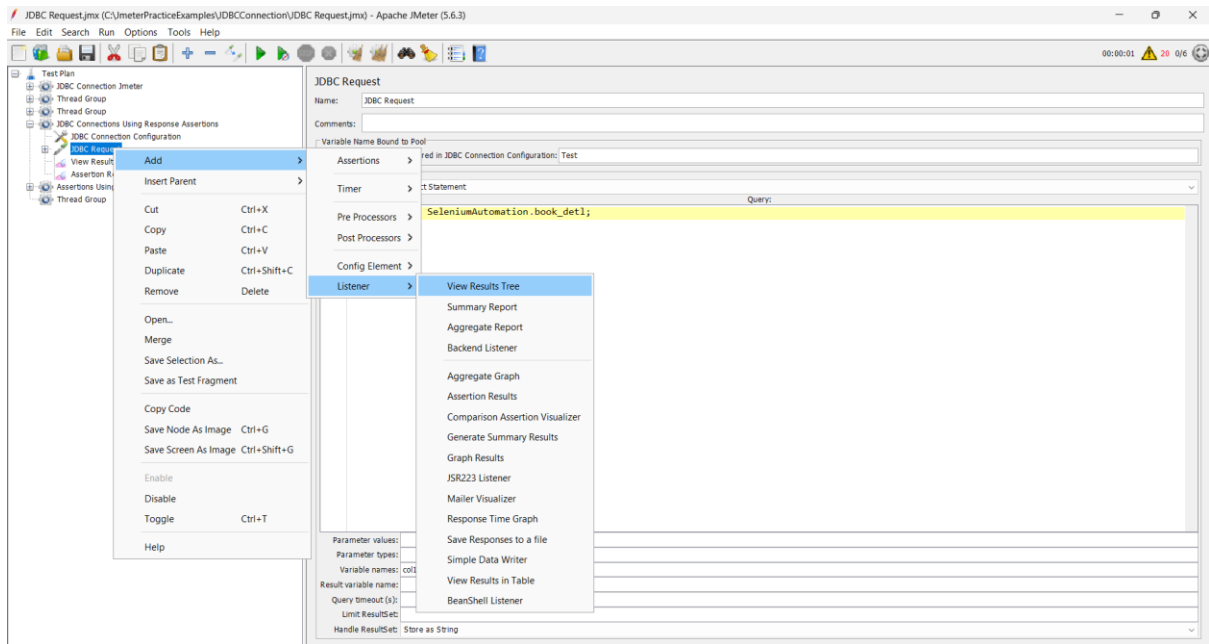

Step 4 – Add JDBC Request

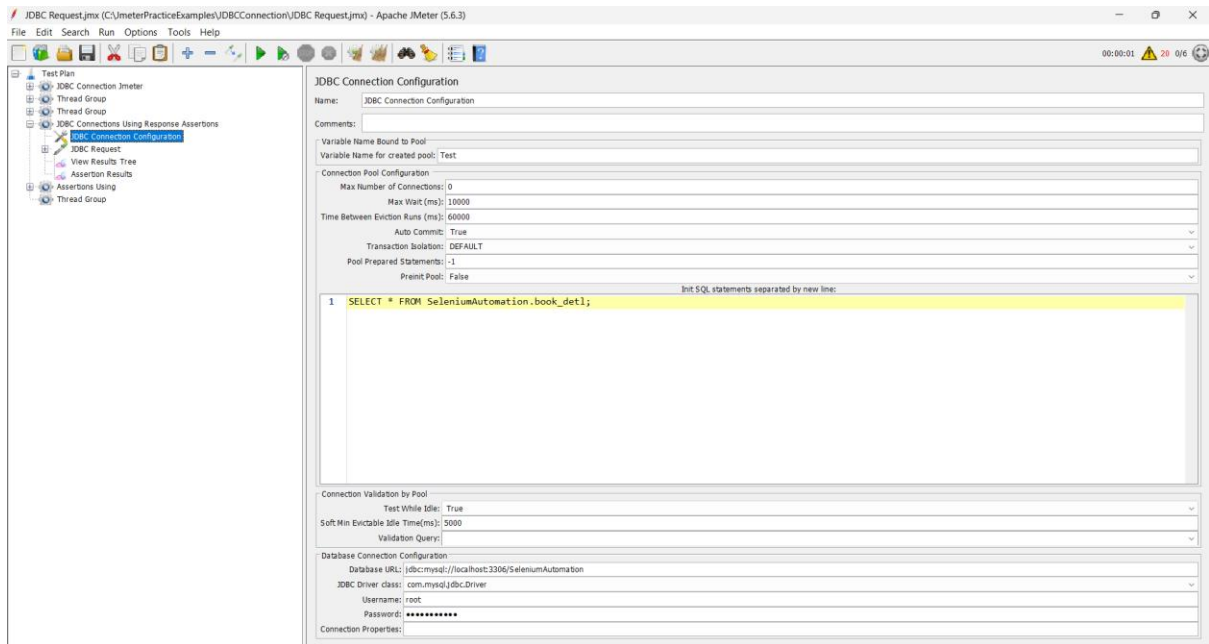

Step 5 – Add Response Assertion

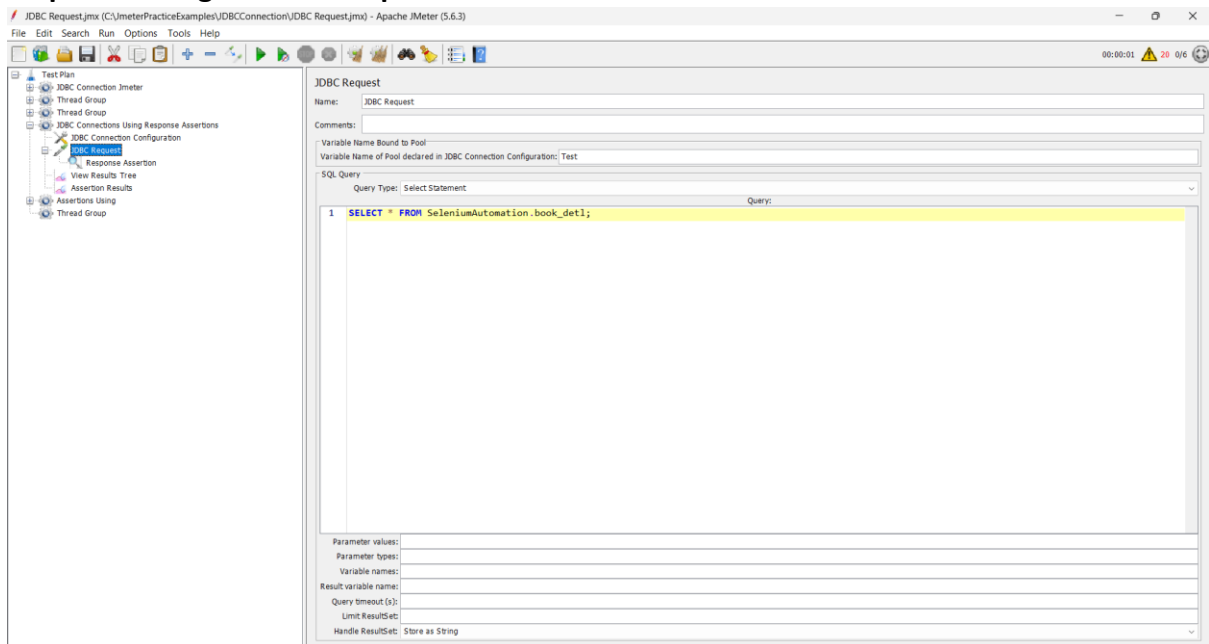

Step 9 – Add Listeners View Results Tree and Assertion Results

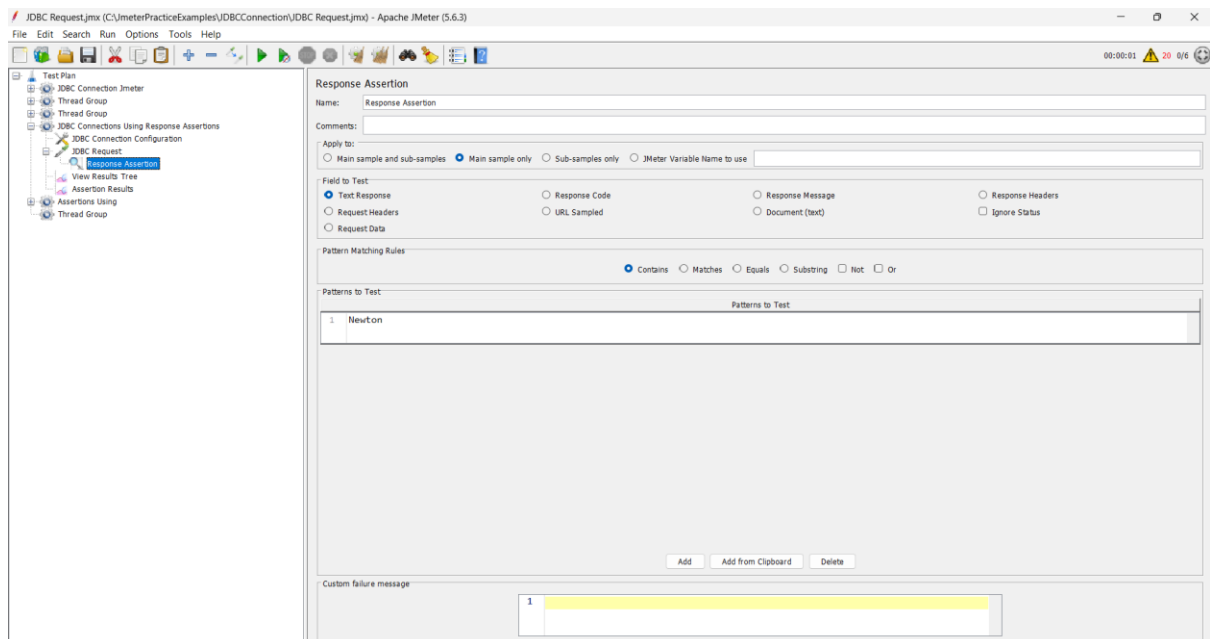

Step 10 – Configure MySQL Connection

Step 11– Configure JDBC Request:

Step 12– Configure Response Assertion : Select the response field to validate and add “Newton” as the expected value.

Step 13 - Run the Test : Run the JMeter test and verify that the JDBC Request executes successfully also verify assertion result
